Change to "Forms"

For later – do nothing right now

The screenshot shows the CenterPoint Energy User Front End interface. The top navigation bar includes links for 'Start Process', 'To-do', 'Tracking', and 'Preferences'. The left sidebar lists various categories, with 'All Startpoints' highlighted. The main content area displays a list of forms, each with an icon, title, and description. A search bar is located at the top of the list. Annotations with blue arrows point to specific elements: 'Folders Change to All Forms' points to the 'All Startpoints' link; 'Logo here' points to the top navigation bar; 'Change to "Forms"' points to the 'Start Process' link; 'For later – do nothing right now' points to the 'Tracking' link; 'List of Forms in a Folder' points to the list of forms; and 'Search will Search ALL Forms in ALL Folders. When they search, you will move selection to "All Forms"' points to the search bar.

When they click on a Form, they will have 1, 2 or 3 choices.

1. Open as printable PDF
2. Open as PDF in browser
3. Download as PDF and open with Acrobat

CenterPoint[®]
Energy

Search will Search ALL Forms in ALL Folders. When they search, you will move selection to "All Forms"

I need you to define the back-end APIs that you need – return JSON.

1. Get Folders
2. Get Forms by Folder
3. Search

Form data:

Name

Description

URL1 – URL to open if Printable PDF

URL2 – URL to open if Interactive PDF in browser

URL3 – URL to open if Download

Backend

We will probably build a backend to:

Add, Update, Delete Folders.

Assign Forms to Folders.

Assign permissions to Folders
